-

EBV ind and EBV: Breeding Value Index and Breeding Value
(EBVs are also expressed as easily interpretable Breeding Value Index)

Birth wght	Birth Weight
Birth Mat	Birth Maternal
Milk	Milk
Wean wght	Weaning weight
12 M	12 M weight (12- and 18 mnths)
Mat.wght	Mature weight
ADG	Average daily gain (growth)
Kleiber	Kleiber ratio (efficient growth on veld)
FCR	Feed Conversion Ratio (kg feed/kg Weight gain)
Length	Body length
Frame Score	Shoulder or hip height
Scrotum	Scrotum circumference
AFC	Age at first calf
ICP	Intercalving period

Logix Genetic Catalogue

The Selection Values in this catalogue indicate the genetic merit of the animals since all environmental effects have been removed. Selection Values are a combination of relevant breeding values and are based on animals that were scientifically measured according to international norms. Breeding values are estimated from performance of ancestors and progeny, as well as own performance.

Selection Value	What does it measure?	Notes
Cow Value	Genetic merit to breed daughters that are fertile, calve easily, wean heavy calves, have lots of milk and low maintenance requirements.	Combination of the sub-values Calving Ease, Milk, Calf Growth, Maintenance and Fertility.
Growth Value	Bulls /Cows with genetic merit for growth and growth efficiency after weaning.	The animal's genetic merit for growth summarized in a single value.
Production Value	Combination of Cow Value and Growth Value.	Single value that summarizes the genetic merit of the animal.

It is easy to interpret Selection Values:

- *Average of the live animals in the breed: 100*
- *Above 100: more desirable,*
- *Below 100: less desirable*

Sub Value	What does an above breed average value (100) mean?
Calving Ease	Smaller calf at birth – easier calving
Milk	Cows / daughters with more milk and better mothering traits
Calf Growth	Heavier calf at wean due to growth ability of the calf itself.
Low Maintenance	Animals with lower maintenance requirements (lower mature weight EBVs).
Fertility	Cows / daughters that calve earlier and / or more regularly.

Star Grading	Selection Value

SA STAMBOUK STUD BOOK

Accuracy (Acc):

The amount of information available for breeding value estimation is indicated with an accuracy value (Acc). The accuracy is a value between 0 and 99. Younger animals have lower accuracies than older animals.

A combination of the following information is used to estimate the accuracy:

- *Parents:* Known or unknown; Accuracy of parents' breeding values.
- *Own measurement:* Animal is measured for trait, or genetically correlated trait
- *Progeny:* Number of progeny measured for trait or correlated traits

Wide interpretation of Acc:

Acc>80%: A lot of information, AI bull, many offspring

Acc>60%: Animal has measured progeny

Acc>30%: Animal measured

Acc <30%: Little information

Auction Date:
Data as on 29/09/2023
