Teelwaarden en Seleksie waardes

Die Teelwaardes en Seleksie Waardes in hierdie verslag dui die genetiese meriete van diere aan – alle omgewingseffekte is uit die waardes verwyder. Die inligting is gebaseer op diere wat wetenskaplik korrek en presies gemeet is volgens internasionaal aanvaarbare metodes. Teelwaardes word beraam uit verskillende bronne van inligting: voorouers, eie prestasie en nageslag. Seleksie waardes is 'n kombinasie van relevante teelwaardes.

														Toetse: -					
														Inent. -					

Seleksie waardes:

Seleksie Waarde (Selekt.W)	Wat beteken 'n waarde bo rasgemiddeld (100)?
KALFGEMAK	Kleiner kalf by geboorte – makliker kalwing
MELK	Koeie met meer melk en beter moeder eienskappe
KALFGROEI	Swaarder kalf by speen as gevolg van groeikragtigheid van die kalf self
ONDERHOUD	Diere met laer behoeftes vir onderhoud.
VRUGBAARHEID	Koeie / dogters wat vroeër en/of meer gereeld kalf.

Maklike interpretasie van Seleksie Waardes en Teelwaarde Indekse:

- Die gemiddeld van lewendige diere in die hele ras is gelyk aan 100
- Bokant 100: meer gewenste rigting,
- Onder 100: minder gewenste rigting
- Meeste diere is gemiddeld (tussen 90 en 110)

Nguni Cow Value and Nguni Growth Value

The Cow and Growth Values combine different weighted breeding values into a single value, making it easier to identify the “best” animal when many traits and consequently many breeding values are involved. Breeding values are weighted scientifically according to economic importance and heritability.

The **Nguni Cow Value** focuses more on fertility and less on growth, while the **Nguni Growth Value** emphasizes growth components without impairment of selection for other important features such as milk and fertility.

Interpretation of Selection Values

Sub Value	<80 (Worse)	80-120 (Safe)	>120 (Better)
Calving ease	Heavier birth wt	Average birth wt	Lower Birth wt
Calf Growth	Low weaning wt	Average weaning wt	Heavy weaning wt
Milk	Low milk	Average milk	High milk
Maintenance	High mature wt / milk	Avg mature wt/milk	Low mature wt/milk
Fertility	Low fertility	Average fertility	High fertility

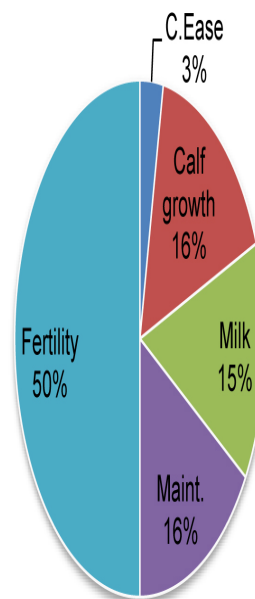

The ‘ideal’ animal will theoretically have the highest possible positive values for all sub-indices, but breeding objectives should always be kept in mind! Highest is not always best.

% Components of the Nguni Cow Value and Nguni Growth Value

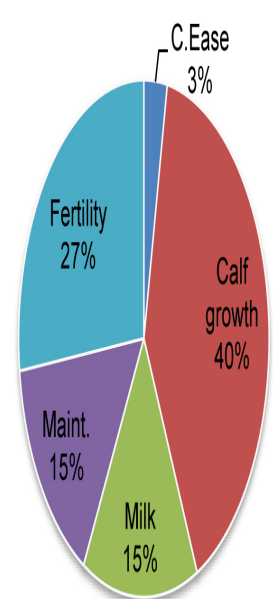

Sub value	EBV	+ or -	Cow Value	Growth Value
Calving Ease	Birth weight	-	2.5	2.5
	Birth maternal	-	0.5	0.5
Calf growth	Weaning weight	+	16	40
Milk	Milk	+	15	15
Maintenance	$\text{Mature wt}^{0.75} + 0.1 \text{ Milk}$	-	16	15
	AFC (age at first calving)	-	10	6
Fertility	ICP (intercalving Period)	-	20	10
	Herd Life (longevity)	+	20	11

Selection values are expressed around 100 (breed average for live animals). 50% of animals in the breed are average and have selection values between 90 and 120 (2.5 and 3 stars).
