

Nguni Cow Value and Nguni Growth Value

The Cow and Growth Values combine different weighted breeding values into a single value, making it easier to identify the “best” animal when many traits and consequently many breeding values are involved. Breeding values are weighted scientifically according to economic importance and heritability.

The **Nguni Cow Value** focuses more on fertility and less on growth, while the **Nguni Growth Value** emphasizes growth components without impairment of selection for other important features such as milk and fertility.

Interpretation of Selection Values

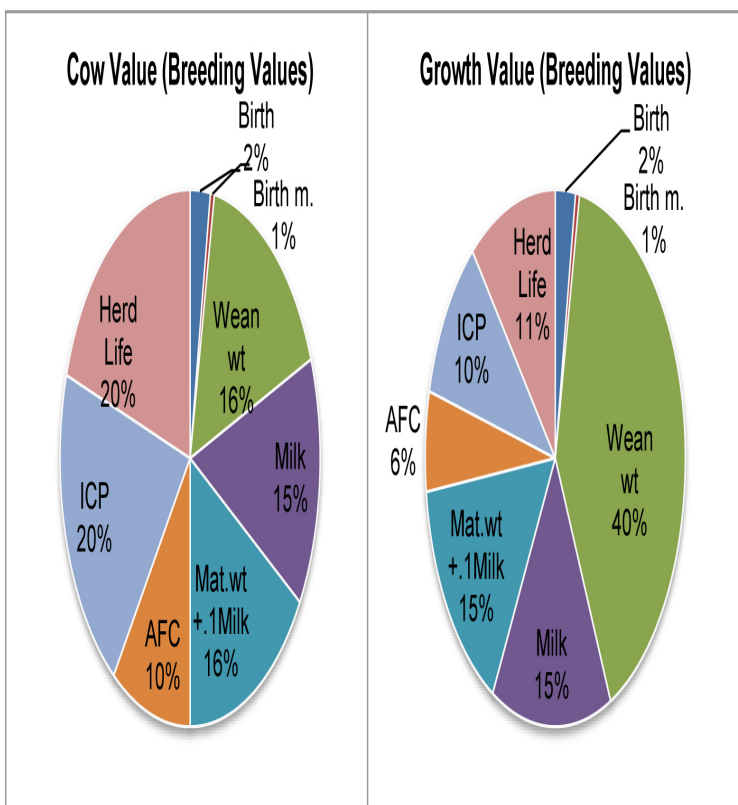

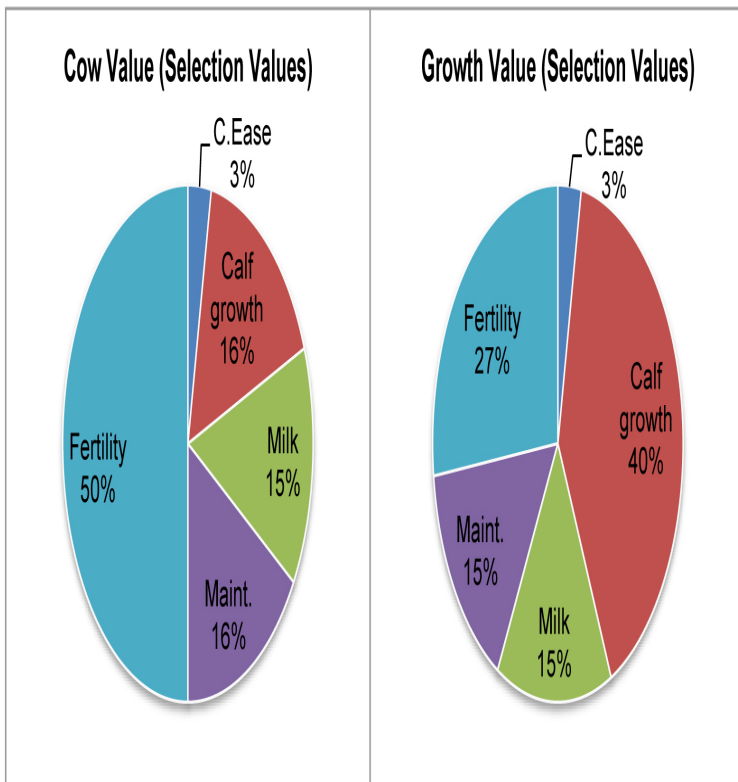

Sub Value	<80 (Worse)	80-120 (Safe)	>120 (Better)
Calving ease	Heavier birth wt	Average birth wt	Lower Birth wt
Calf Growth	Low weaning wt	Average weaning wt	Heavy weaning wt
Milk	Low milk	Average milk	High milk
Maintenance	High mature wt / milk	Avg mature wt/milk	Low mature wt/milk
Fertility	Low fertility	Average fertility	High fertility

The ‘ideal’ animal will theoretically have the highest possible positive values for all sub-indices, but breeding objectives should always be kept in mind! Highest is not always best.

% Components of the Nguni Cow Value and Nguni Growth Value

Sub value	EBV	+ or -	Cow Value	Growth Value
Calving Ease	Birth weight	-	2.5	2.5
	Birth maternal	-	0.5	0.5
Calf growth	Weaning weight	+	16	40
Milk	Milk	+	15	15
Maintenance	Mature wt ^{0.75} + 0.1 Milk	-	16	15
	AFC (age at first calving)	-	10	6
Fertility	ICP (intercalving Period)	-	20	10
	Herd Life (longevity)	+	20	11

Selection values are expressed around 100 (breed average for live animals). 50% of animals in the breed are average and have selection values between 90 and 120 (2.5 and 3 stars).
