HAAL DIE RAAIWERK UIT BULKOOP

Genetiese teeltwaardes (die syfers in die tabel by elke lot nr en hieronder) is die beste aanduiding van hoe 'n bul gaan teel en is 'n goeie seleksie-hulpmiddel.
Meer hieroor onder aan die bladsy.

Die **SIMBRA RAS** se BREEDPLAN teeltwaardes word hier in die boonste derde, middelste en laagste derdes verdeel. Plaas die teeltwaardes van 'n dier in een van dié drie groepe en moenie dat klein verskille in teeltwaardes u pla nie. Telers moet hul individuele teeltbeleid ingedagte hou tydens bulseleksie.

2018 TWS	BIRTH	200	400	600	COW	MILK
Boonste 1/3	< 0.8	> 17	> 24	> 32	> 34	> 4

[< = Laer as - = Tussen > = Hoër as]

BLUP Teeltwaardes (TW)

- Is NIE oor rasse heen vergelykbaar nie.
- Stel jou in staat om diere binne die Simbra ras, tussen kuddes en oor jare met mekaar te vergelyk. (Jy kan bv 'n drie jaar oud bul in Windhoek vergelyk met 'n jaaroud bul in Pretoria).
- Die hoogste TW is nie noodwendig die beste nie. Die ideaal vir Simbra is in die onderste kolom van die tabel hierbo.
- Die betroubaarheid van TWs word in 'n % syfer uitgedruk wat onder die TW staan – hoe hoër die % hoe kleiner die waarskynlikheid dat die teeltwaarde kan verander.
- Verander jaarliks soos wat meer inligting bykom. ('n TW het 'n gelyke kans om op- of afwaarts te verander).
- Hoe vergelyk vandag se TWs van my "ou bul" met die jong bul wat ek nou in die oog het? (Om my kudde te verbeter moet die jong bul mos beter wees as die oue). Besoek www.simbra.org, kies "Dier Navraag / Animal Enquiry" en tik die bul se identifikasie (in die oor) in die veld "Animal Identifier" vir die jongste TWs – die diens is gratis beskikbaar aan alle belangstellendes.

Understanding possible changes in EBV's for Southern Africa Simbra

(Johan Potgieter)

The accuracy associated with a breeding value (EBV) gives an indication of its reliability and the likely extent of its possible change as more information becomes available. EBVs are based on the available information at the time of the genetic analysis. As more data becomes available on an animal (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase.

For example, a bull at 18 months of age might have EBVs based on his own performance and the performance of his siblings, parents and other relatives. As the bull is used, and his progeny recorded, more information is available about his likely genetic merit. As a result, his EBVs may change and the accuracies will increase.

Accuracy are influenced by the heritability of a trait and the genetic associations existing between traits. For low heritable traits, more information is required to achieve a similar accuracy to that of highly heritable traits.

Accuracies are expressed as percentages. The higher the percentage, the greater the chance that the EBV is a close estimate of the animal's true genetic merit, and the less the likelihood that the EBV will change as more information becomes available. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. Generally, as more information becomes available, an EBV is just as likely to increase as it is to decrease.

The maximum likely change to EBVs at different accuracy levels is indicated by the standard error associated with different accuracies. The magnitude of the standard errors decrease as the accuracies increase. Statistically, there is a 68% chance that an animal's true breeding value will be within 1 standard error of its EBV, and a 96% chance that it will be within 2 standard errors of the EBV.

Table 1. Confidence ranges ¹ (standard error) for EBV's at different levels of accuracy for Southern Africa Simbra

¹ Statistically there is a 68% chance that an animal's true breeding value will be within 1 standard error of its EBV and 96% chance that it will be within 2 standard errors of its EBV.

For example, a 200d EBV with an accuracy of 90% will have a standard error of ± 4.7 kg. If an animal's 200d EBV is +25 kg, then with the addition of further information (e.g. progeny or sibling records), the EBV would be expected to fall within the range of +20.3 kg to +29.7 kg (i.e. 25 kg \pm 4.7 kg) 68% of the time; and within the range of +15.6 kg to +34.4 kg (i.e. 25 kg \pm 9.4kg) 96% of the time.

HAAL DIE RAAIWERK UIT BULKOOP

Genetiese teeltwaardes (die syfers in die tabel by elke lot nr en hieronder) is die beste aanduiding van hoe 'n bul gaan teel en is 'n goeie seleksie-hulpmiddel. Meer hieroor onder aan die bladsy.

Die **SIMMENTALER RAS** se BREEDPLAN teeltwaardes word hier in die boonste derde, middelste en laagste derdes verdeel. Plaas die teeltwaardes van 'n dier in een van dié drie groepe en moenie dat klein verskille in teeltwaardes u pla nie. Telers moet hul individuele teeltbeleid ingedagte hou tydens bulseleksie.

BLUP Teeltwaardes (TW)

- Is NIE oor rasse heen vergelykbaar nie.
- Stel jou in staat om diere binne die Simmentaler ras, tussen kuddes en oor jare met mekaar te vergelyk. (Jy kan bv 'n drie jaar oud bul in Windhoek vergelyk met 'n jaaroud bul in Pretoria).
- Die hoogste TW is nie noodwendig die beste nie. Die ideaal vir Simmentaler is in die onderste kolom van die tabel hierbo.
- Die betroubaarheid van TWs word in 'n % syfer uitgedruk wat onder die TW staan – hoe hoër die % hoe kleiner die waarskynlikheid dat die teeltwaarde kan verander.
- Verander jaarliks soos wat meer inligting bykom. ('n TW het 'n gelyke kans om op- of afwaarts te verander).
- Hoe vergelyk vandag se TWs van my "ou bul" met die jong bul wat ek nou in die oog het? (Om my kudde te verbeter moet die jong bul mos beter wees as die oue). Besoek www.simmentaler.org, kies "Dier Navraag / Animal Enquiry" en tik die bul se identifikasie (in die oor) in die veld "Animal Identifier" vir die jongste TWs – die diens is gratis beskikbaar aan alle belangstellendes.

Understanding possible changes in EBVs for Southern Africa Simmentaler

(Johan Potgieter)

The accuracy associated with a breeding value (EBV) gives an indication of its reliability, and the likely extent of its possible change as more information becomes available. EBVs are based on the available information at the time of the genetic analysis. As more data becomes available on an animal (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase.

For example, a bull at 18 months of age might have EBVs based on his own performance and the performance of his siblings, parents and other relatives. As the bull is used, and his progeny recorded, more information is available about his likely genetic merit. As a result, his EBVs may change and the accuracies will increase.

Accuracy are influenced by the heritability of a trait and the genetic associations existing between traits. For low heritable traits, more information is required to achieve a similar accuracy to that of highly heritable traits.

Accuracies are expressed as percentages. The higher the percentage, the greater the chance that the EBV is a close estimate of the animal's true genetic merit, and the less the likelihood that the EBV will change as more information becomes available. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. Generally, as more information becomes available, an EBV is just as likely to increase as it is to decrease.

The maximum likely change to EBVs at different accuracy levels is indicated by the standard error associated with different accuracies. The magnitude of the standard errors decrease as the accuracies increase. Statistically, there is a 68% chance that an animal's true breeding value will be within 1 standard error of its EBV, and a 96% chance that it will be within 2 standard errors of its EBV.

¹ Statistically there is a 68% chance that an animals true breeding value will be within 1 standard error of its EBV and 96% chance that it will be within 2 standard errors of its EBV.

For example, a 200d EBV with an accuracy of 90% will have a standard error of ± 4.0 kg. If an animal's 200d EBV is +25 kg, then with the addition of further information (e.g. progeny or sibling records), the EBV would be expected to fall within the range of +21 kg to +29 kg (i.e. 25 kg \pm 4.0 kg) 68% of the time; and within the range of +17 kg to +33 kg (i.e. 25 kg \pm 8kg) 96% of the time.

VERKOPER:

- Johan Schroeder : 082 452 0643
- Dr Bodo Schroeder : 083 297 6025

Kudde geskiedenis: Die Bolle Drakensberger stoet het ontstaan deur 'n teelbeleid toe te pas wat gefokus is op ekonomiese eienskappe, nl: aanpasbaarheid, vrugbaarheid, melk, om goeie swaar speenkallers te lewer, goeie voeromset verhoudings, 'n goeie groei met 'n medium tot effens swaarder bees. Die stoet bestaan sedert 1971 en handhaaf 'n jaarlikse TKP van 365 dae, kalfpersentasie van bo 97%, gemiddelde speengewigte van 249kg op 205 dae en het reeds twee keer die bes produserende koei binne die ras behaal. Het verder verskeie goue en platinum toekennings vir bulle sowel as Elite Beefbreeder of The Year toekenning vir 2015 ontvang.

Kudde gesondheid: Kudde loop op strawwe Rooiwater- en Galsiekte veld en kry in die somer P6 fosfaatlek en in die wintermaande 'n proteienlek. Bulle getoets vir BVD, Brucelose, vrugbaarheid, semen kwaliteit en skrotum omvang. Kudde negatief getoets vir BM en TB en is Trichomoniasis vry.

Inentings: 'n Maand voor speen One-Shot-Ultra en Bovishield wat herhaal word op 12 maande en bo 15 maande met RB51. Alle vee word jaarliks in Mei en weer einde September met Vit A en Multimin gespuit. Op 18 maande met Knopvel, Drie dae Stywesiekte, Spons-, Milt- en Lamsiekte. Koeie & verse word jaarliks voor die teelseisoen Vibrio gespuit.

Logix Genetiese Katalogus

Die Seleksie Waardes in hierdie verslag dui die genetiese meriete van diere aan – alle omgewingseffekte is uit die waardes verwyder. Seleksie waardes is 'n kombinasie van relevante teelwaardes. Die inligting is gebaseer op diere wat wetenskaplik korrek en presies gemeet is volgens internasionaal aanvaarbare metodes. Teelwaardes word beraam uit verskillende bronne van inligting: voorouers, eie prestasie en nageslag.

Maklike interpretasie van Seleksie

Waardes:

- Gemiddeld van lewendige diere in die hele ras: 100
- Bokant 100: meer gewenste rigting.
- Onder 100: minder gewenste rigting

Akkuraatheid (Akk):

Die hoeveelheid inligting beskikbaar vir teelwaarde beraming word aangedui met die **akkuraatheid (Akk)**. Hoe nader aan 100, hoe meer inligting. Jonger diere het laer akkuraatheids as ouer diere.

Inligting wat gebruik word, is 'n kombinasie van die volgende:

- **Ouers:** bekend, akkuraatheid van ouers se teelwaardes
- **Eie meting:** Dier self gemeet vir eienskap of gemeet vir geneties gekorrleerde eienskap
- **Nageslag:** Aantal nageslag gemeet vir eienskap of gekorrleerde eienskappe

Wye interpretasie van Akk:

Akk > 80%: Baie inligting, XI bul, baie nageslag

Akk > 60%: Dier het gemete nageslag

Akk > 30%: Dier gemeet

Akk < 30%: Min inligting

Sub Waarde Wat beteken 'n waarde bo rasgemiddeld (100)?

Kalfgemak	Kleiner kalf by geboorte – makliker kalwing
Melk	Koeie met meer melk en beter moeder eienskappe
Kalfgroei	Swaarder kalf by speen as gevolg van groeikragtigheid van die kalf self
Onderhoud	Diere met laer behoeftes vir onderhoud (laer Volwasse gewig EBVs).
Vrugbaarheid	Koeie / dogters wat vroeër en/of meer gereeld kalf.

Ster Gradering	Seleksie Waarde
☆	<60
★	60-69
★★	70-79
★★★	80-89
★★★★	90-99
★★★★★	100-109

Seleksie waarde	Wat meet dit?	Notas
Koei Waarde	Genetiese meriete om dogters te teel wat vrugbaar is, maklik kalf, swaar kalwers speen, baie melk het terwyl onderhoud behoeftes laag is.	Kombinasie van die sub-waardes Kalfgemak, Melk, Kalfgroei, Onderhoud en Vrugbaarheid.
Groei Waarde	Bulle / Koele se genetiese meriete vir groei en groei-doeltreffendheid na speen.	Die dier se genetiese vermoë vir groei in een waarde opgesom.
Produksie Waarde	Kombinasie van Koel waarde en Groei waarde.	Een enkele waarde wat die genetika van die dier opsom.

8. Indien die Afslaer bewus raak van enige fout op advertensie materiaal of enige ander publikasie of enige wysiging in hierdie veilingsreëls, sal die Afslaer spesifiek die wysigings in die reëls uitwys sowel as die foute in die advertensie of publikasie.
9. Enige persoon wat die veiling bywoon om self te bie moet, voor die aanvang van die veiling, registreer as 'n Koper op die kopersrol en voldoen aan die vereistes soos voorgeskryf in Hoofstuk 1 van FICA 2001 en die kopersrol/koperskaart onderteken.

(Vir doeleindes van hierdie reël, sluit die verwysing na maatskappy ook 'n verwysing in na enige juridiese persoon, insluitend vennootskappe, trusts of regsliggame).
12. Alle Kopers het 'n reg om die bates te koop aangebied te inspekteer en die Afslaer sal redelike tyd en toegang hiervoor toelaat voor aanvang van die veiling.

17. Indien die Koper nie die koopprys onmiddellik betaal nie en verder geen gepaste reëlings met die Afslaer getref het nie, sal/kan die Afslaer die verkoop kanselleer en die bate of lot as onverkoopte bates hanteer en dit of weer aanbied op die veiling of by afloop van die veiling uit die hand uit namens die Verkoper verkoop, afhangend van die Verkoper se mandaat aan die Afslaer.
18. Eiendomsreg in die lot sal gevestig bly in die Verkoper totdat die koopprys daarvan ten volle aan die Verkoper verreken is, met die voorbehoud dat risiko in die bates of lot reeds by toestaan van die bod oorgaan na die Koper soos uiteengesit in klousule 23.
